EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark Kusner on 31 July 2006.

The application has been amended as follows:

In claim 1:

In line 22, insert –from the water line— after “reprocessor”.

In claim 3:

In line 2, insert –a plurality of— after “comprising”.

In claim 16:

In line 4, change “filtration systems” to –filtration system--.

2. The following is an examiner's statement of reasons for allowance: The device and method, as set forth in claims 1, 9, and 19, is not taught or suggested by the closest prior art, Sundheimer (US 4,617,065). As set forth in Applicant's arguments dated 23 November 2005,

Art Unit: 1744

specifically pages 12-13, although Sundheimer discloses a device reprocessor including a bypass line **71,73** having a filtration system **75** therein, Sundheimer fails to teach or suggest a bypass line connected to a portion of the fluid feed line containing the filters wherein the bypass line *bypasses the filter elements*.

As to claim 23 and the method of checking filter integrity in a reprocessor, Nakanishi et al. (JP 411128158) teaches the use of pressure measurements to test a single filter in an endoscope reprocessor, but fails to teach or suggest the specific method of filter integrity testing as set forth in claim 23. Specifically, Nakanishi et al. discloses only measuring the pressure drop across a filter for determination of filter integrity. However, instant claim 23 requires a first step of measuring the pressure differential of gas dissipating through a filter element and a leak orifice and a second step of measuring the pressure differential of gas dissipating through only the filter element. These two measurements are then used together to determine the flow rate through the filter. This aspect of the invention is not taught or suggested by Nakanishi et al..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
